REGISTERED LETTER

Attention to the examiner: Mr. Christopher VERDIER.
RE: Patent Application NO. 10/679,475
TITLE: Versatile Axial Fan and Centrifugal Shutter Mechanism
INVENTOR: Angelo Milana

Referring to the to-day phone communication please note the following:

I wish to add two words on claim 23
Ref. Page. 5 of the Notice of Allowability (that I did not receive) but is available in Internet. and somebody faxed to me few pages 5,6,7,8 with the claims .

New claims 23- 27 are added:

--23 (New) An improved axial fan for exhausting humid, corrosive and dusty air, the improvements comprising:

a) a housing enclosure having an inner cavity defining an air flow passageway having large radii corner and a first opening of square section with a shutter assembly comprising a frame in which are pivotally mounted a plurality of **vertical pivoted** vanes, including a central vane, for closing or opening said first opening, each of said vanes being pivotally interconnected, with cranks rods and at least a tie rod, said frame further comprising an operative extension spring with one end connected to said frame and the other end connected to said tie rod for urging, upon fan rotation, the shutter vanes toward a full wide position,
b) ----------

As I said during the phone conversation dated march 21, 2006 I would like to add at least the two words "**vertical pivoted**" before vanes. Or will be even better to say: **vertical or horizontal pivoted** vanes, ... as I indicated on Amendment A date September 28, 2005.

Best regards.
Angelo Milana
